

As part of our plan to protect our environment and watercourses, The Town of Portland has hired a certified company under State Contract to conduct its annual vegetation control on fence lines, warning tracks, guiderails etc. They will be applying an approved agent that **does not contain Glyphosate** or any other pesticide that will cause damage to our environment. The parks that will be affected include Rose Hill, Nolan Park, Tomasso Field and the Riverfront Park. This will be done over the week of May 18-22. Guiderails throughout town will be completed over the summer months as needed to control vegetation and site lines for safety.
